EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Faustino A. Lichauco, Reg. No. 41,942 on 5/26/2005.

2. The application has been amended as follows:

Claim 1, A method comprising: estimating, on the basis of a constellation error in a received orthogonal frequency division multiplexed (OFDM) ~~OFDM~~ signal, an extent of an in-phase / quadrature (I/Q) ~~I/Q~~ imbalance error, caused by direct IQ conversion of said received OFDM signal; and on the basis of said extent, estimating an equalizing transformation that reduces said error, wherein estimating a transformation comprises evaluating an equalizer matrix.

Claim 9, A receiver comprising: an I/Q imbalance estimator for estimating, on the basis of a constellation error of a received orthogonal frequency division multiplexed (OFDM) ~~OFDM~~ signal, an in-phase / quadrature (I/Q) ~~I/Q~~ imbalance error, caused by direct conversion of said received signal; an adaptive filter system in communication with said

I/Q imbalance estimator for generating an equalizing transformation for reducing said I/Q imbalance error; and a weight-update block in communication with said adaptive filter system and said I/Q imbalance estimator, said weight-update block being configured to update weighting coefficients of said adaptive filter system on the basis of an error signal provided by said I/Q imbalance estimator.

Claim 15, An adaptive filter system comprising a first adaptive filter for generating a first transformation on the basis of a first portion of a received orthogonal frequency division multiplexed (OFDM) OFDM signal spectrum; and a second adaptive filter for generating a second transformation on the basis of a second portion of said spectrum; and a weight-update block in communication with each of said first and second adaptive filters, said weight-update block being configured to determine weighting coefficients for said first and second adaptive filters on the basis of an error signal.

Claim 18, A transmitter comprising: an in-phase / quadrature (I/Q) I/Q imbalance estimator for estimating, on the basis of a constellation error of an orthogonal frequency division multiplexed (OFDM) OFDM signal, an I/Q imbalance error, caused by direct conversion of said signal; and an adaptive filter system in communication with said I/Q imbalance estimator for generating an equalizing transformation for reducing said I/Q imbalance error; and a weight-update block in communication with each of said first and second adaptive filters, said weight-update block being configured to determine

weighting coefficients for said first and second adaptive filters on the basis of an error signal.
